Mr. Martin Hestmark
U. S. Environmental Protection Agency, Region VIII
ATTN: Rocky Flats Project Manager, 8HWM-RI
999 18th Street, Suite 500, 8WM-C
Denver, Colorado 80202-2405

Mr. Joe Schieffelin, Unit Leader Hazardous Waste Control Program Colorado Department of Public Health and Environment 4300 Cherry Creek Drive South Denver, Colorado 80222-1530

Gentlemen:

The purpose of this letter is to notify the Environmental Protection Agency (EPA) and the Colorado Department of Public Health and the Environment (CDPHE) of the Department of Energy's intention to transfer Individual Hazardous Substance Site (IHSS) 176 from Operable Unit (OU) 10 to OU 4. Located on IHSS 176 is an operating RCRA storage facility located in Building 964. This building and the storage facility will not be included in the transfer because we expect the building to be closed following a RCRA closure plan, as specified under Colorado and federal statutes.

IHSS 176 is identified in the Interagency Agreement (IAG) as the S&W Contractor Yard. It is located approximately 50 feet east of the Solar Evaporation Ponds and is a rectangle about 290 ft. by 390 ft. (according to the IAG). The area was used as a storage for contractor material since 1970. The area was not intended for hazardous waste storage; however, several containers of volatile organics, waste oil, and metals were found in 1985. Based on the discovery of the hazardous wastes and some ground staining, the area was sampled in 1988. The IAG included IHSS 176, based on the 1988 sampling data that showed elevated levels of aluminum, arsenic, barium, beryllium, chromium, sodium, thallium, calcium, copper, iron, lead, magnesium, manganese, mercury, nickel, potassium, vanadium, zinc, strontium, nitrate/, gross alpha, gross beta, tritium, americium, 241, plutonium 239 and 240, and uranium 233, 234, and 238. The IAG milestone for the Phase I Interim Measure/Interim Remedial Action (IM/IRA) Construction of IHSS 176 is February 9, 1998.

Solar Ponds project desires to annex IHSS 176 due to the proximity of IHSS 176 to OU 4 and he ability of OU 4 to start construction of IHSS 176 well ahead of the IAG start of construction nilestone for OU 10 (September 1995 for OU 4 versus February 9, 1998 for OU 10).

Though characterization of IHSS 176 is not yet complete, preliminary data shows contaminants similar to those in OU 4. Depending on the final results of the sampling effort we may need to establish additional Preliminary Remediation Goals (PRG) for any IHSS 176 analytes not found n OU 4. The assumption is that the work plan for the Phase II RCRA Facility Investigation/Remedial Investigation (RFI/RI) can be amended to cover any additional work that might

be necessary to account for incomplete or missing data to effectively characterize IHSS 176. The Draft Phase I Non-Intrusive Technical Memorandum for OU 10 is expected to be completed at the end of August 1994. The OU 10 Manager has indicated that, as of now, the remediation remedy recommended for IHSS 176 may be "hot-spot" removal and capping. The same remedy was suggested in the Strategic Planning Initiative, Review, and Implementation Team (SPIRIT) draft document entitled, "An Analysis of the Potential for Redirection of the Rocky Flats Environmental Restoration Program." The OU 4 remedy is also excavation of media and waste and capping. Thus the IHSS 176 is compatible with OU 4 Phase I IM/IRA.

If you have any question or comments regarding this issue please contact Frazer Lockhart at 966-7856, or Regina Sarter at 966-7252.

Sincerely,

Steven W. Slaten

IAG Project Coordinator
